PILOT PROPOSAL FOR [CAFÉ / BAKERY NAME]

Turn closing-time leftovers into new customers.

No delivery. No upfront fee. You pack one bag at closing; customers pay online and walk in to collect it.

How it works

1
You set the bag
How many bags today, at what price, pickup window (e.g. 8:00–8:30 pm).

2
Customers prepay
Reserve on [Messenger / app] and pay with GCash or Maya. No cash, no no-shows.

3
You pack one bag
At closing, put the day's unsold items in a sealed bag. About 5 minutes.

4
They come to you
Customer shows a pickup code in-store. Scan, hand over, done.

What you get

1. New customers
Every pickup is a person walking into your shop. We tag each one as new or returning and report it to you.

2. Cash for what you'd bin
Items that earn zero after closing now bring in revenue, without touching your regular prices.

3. No extra work
No delivery, no repricing, no handling payment. One bag, one scan.

What it costs

Item	Terms
Setup / monthly fee	**None**
Pilot period (4 weeks)	**0% commission**
After pilot	[20]% only on bags that actually sell. Unsold bag = you pay nothing.
Minimum volume	None. You choose 1, 2 or 5 bags a day. Pause anytime.

Why pickup, not delivery? Delivery would cost more than a surplus bag earns, and it keeps customers out of your shop. Pickup keeps your margin and puts new faces at your counter.

What you'll see every month

A one-page report per shop. Sample layout below, **figures are illustrative only, not results**.

Metric	Sample	Why it matters
Bags sold	48	Direct revenue from stock you would have binned
First-time customers	31 (65%)	New people who walked into your shop
Add-on spend at pickup	PHP 2,150	Extra purchases made while collecting
Return visits within 14 days	9 customers	Surplus-bag shoppers who came back at full price

Each bag has its own pickup code, so new vs returning is measured, not guessed. If the numbers don't show real new customers, we'll tell you and you can stop.

You stay in control

- You decide quantity, price and pickup time
- Same-day items only, packed to your usual hygiene standard
- Bag value is always clearly higher than its price

- Your regular menu prices are never shown or discounted
- Allergen and "contents vary" notice shown to customers
- Pause or leave any time, no penalty

Food safety, liability and permit responsibilities will be set out in a short pilot agreement. Please review it against your own local permit requirements before signing.

Common questions

Will it cheapen my brand? Customers see a "surprise bag", not your price tags. Your menu prices stay exactly as they are.

Won't my regulars just switch to the cheap bag? They might. That's why we track it. If regulars are replacing full-price purchases, we adjust bag count or stop. Your decision.

What if no one buys? You pay nothing. You can also post fewer bags.

What if the bag isn't good enough? We set a minimum value rule with you. Bad bags kill repeat buyers, so it's in both our interests.

How much of my time does this take? About 5 minutes at closing, plus a 30-minute setup call.

Pilot plan

When	What happens
Day 0	30-min setup: bag rules, pickup window, payment test
Weeks 1–4	Live pilot, daily bags, weekly check-in message
End of week 4	Review report together. Continue, adjust, or stop.
